

AUTHOR PHOTOGRAPH: HENRY CHAN

JEFFREY S. ROSENTHAL is a professor of statistics at the University of Toronto. He received his BSc in mathematics, physics, and computer science from the University of Toronto at the age of 20; his PhD in mathematics from Harvard University at the age of 24; and tenure at the age of 29. He has been awarded the CRM-SSC Prize, the SSC Gold Medal, Fellowship of the Royal Society of Canada and of the Institute of Mathematical Statistics, and the COPSS Presidents' Award. He has also received teaching awards at both Harvard and U of T. Rosenthal's first book, *Struck by Lightning: The Curious World of Probabilities*, was a national bestseller in Canada and was published in fourteen countries and in ten languages. Visit him online at Probability.ca and on Twitter @ProbabilityProf. Despite being born on Friday the Thirteenth, Rosenthal has had a very fortunate life.

ADVANCE PRAISE FOR **KNOCK ON WOOD**

"Once again, University of Toronto statistics professor Jeffrey S. Rosenthal has written a thoroughly engaging book, this time on the topic of luck. Each page provides a charming anecdote illustrating an insight that will make you smile in recognition of a surprising truth. Get this book for yourself but also for family and friends—both those who believe only logic, science, and cause and effect have all the answers and those who swear there are mysterious forces that often determine our fate. After you read this book, you will think differently about the role of luck in your life, and next time you will choose your parents more wisely."

—**MICHAEL ADAMS**, president of Environics and author of *COULD IT HAPPEN HERE? CANADA IN THE AGE OF TRUMP AND BREXIT* and *FIRE AND ICE: THE UNITED STATES, CANADA AND THE MYTH OF CONVERGING VALUES*

"'Good luck!' Something we say almost every day with the best of intentions but little thought. What are we really honouring when we say good luck? *Knock on Wood* is a must-read for anyone who wants to understand why things happen."

—**DARRELL BRICKER**, CEO, Ipsos Public Affairs, co-author of the bestseller *THE BIG SHIFT*

PRAISE FOR **STRUCK BY LIGHTNING**

"Statistics and probability made fun, easy and useful for everyday life. . . . Sure to deliver an A to everyone, which is what Rosenthal deserves for this clever book."

—**PUBLISHERS WEEKLY**

"Odds are you'll keep reading. . . . Rosenthal's book is a useful primer on probabilities, one that will be clear even to people who haven't cracked a math book since high school." —**THE GLOBE AND MAIL**

ROSENTHAL**

KNOCK ON WOOD

*Luck, Chance, and
the Meaning of Everything*

JEFFREY S. ROSENTHAL

Bestselling author of *Struck By Lightning: The Curious World of Probabilities*

CAN \$32.99

FOR CENTURIES, people around the world have prayed for good luck and warded against bad. Every language features a good luck greeting. Sailors have long looked for an albatross on the horizon as an auspicious symbol. Jade, clovers, rabbits' feet, wishbones: these items have lined the pockets of those seeking good fortune. For some, it's bad luck to walk under a ladder, to enter and leave a home through different doors, or to say "Macbeth" in a theatre. But is there such a thing as luck, or does luck often simply explain common sense? Don't walk under a ladder because, well, that's just dangerous. You won the lottery not because of any supernatural force but because a random number generator selected the same numbers that you picked out at the corner store. You run into a neighbour from your street on the other side of the world: chance or pure fate? (Or does it depend on how much you like your neighbour?)

Jeffrey S. Rosenthal, author of the bestseller *Struck by Lightning: The Curious World of Probabilities*, was born on a Friday the Thirteenth, a fact that he discovered long after he had become one of the world's pre-eminent statisticians. Had he been living ignorantly and innocently under an unlucky cloud for all those years? Or is thirteen just another number? As a scientist and a man of reason, Rosenthal has long considered the value of luck, good and bad, seeking to measure chance and hope in formulas scratched out on chalkboards.

In *Knock on Wood*, Rosenthal, with great humour and irreverence, divines the world of luck, fate, and chance, putting his considerable scientific acumen to the test in deducing whether luck is real or the mere stuff of superstition.
